

POTHOLES?

STOP.

DROP.

LET 'EM ROLL.

with

Municipalities across the country spend millions of dollars a year on temporarily repairing what we call *thumpers* - potholes large enough to pop a tire or snap an axle - but inclement weather conditions and constraints on labor/monetary resources prevent timely repairs. The **Pothole Pillow** is the solution: the **ONLY immediate, reusable, all-weather**, temporary pothole repair product available. With the **Pothole Pillow** potholes can be repaired significantly faster than any conventional method, even in poor weather!

The “Thumper” Problem

Potholes happen. They’ve always been a nuisance to both municipalities and citizens, and will continue to be.

“Thumpers” are the deep potholes that can cause significant damage and mounting claims. These need to be taken care of quickly, but time and weather don’t always allow for a permanent repair.

This is the application that the **Pothole Pillow** has been designed for.

The Pothole Pillow

The **Pothole Pillow** is a shock-absorbing pad used to instantly repair thumpers, even in inclement weather conditions. Users simply place it in a pothole and effectively quell the dangers they present. Even in inclement weather conditions, the **Pothole Pillow** will prevent damages caused by driving over a pothole.

The process to implement a **Pothole Pillow** requires mere seconds, which allows for users to patch thumpers at 20x the rate of conventional patching. Once weather improves or time allows for permanent repair, users can pick up the **Pothole Pillow**, throw it back in their vehicle, and use the **Pothole Pillow** in another thumper.

- Patch thumpers in mere seconds, even in inclement weather
- Demonstrate municipalities’ commitment to quick pothole repair
- Reusable in numerous potholes for months
- Reduce citizen claims for car damage
- Requires no equipment and minimal training
- Can be used by other municipal employees (i.e. police officers, trash collectors, etc.) for emergency repair
